For U.S. health care providers

# Hospital Scorecards for Skilled Nursing Facilities

Published - March 2021 • 20-min read

# Introduction

## Scorecard methodology

This document is an explanatory scorecard—providing suggested metrics for meaningfully evaluating SNFs' potential to support system accountable care goals, along with a rationale explaining the importance of each metric.

Researchers drew from the following sources to select these metrics:

- Scorecards and performance metrics used by peer institutions nationwide
- Clinical literature on criteria impacting quality and efficiency of care for SNF patients and residents
- Post-Acute Care Collaborative expert knowledge of the capabilities and services necessary for SNFs to successfully support accountable care goals

This scorecard is available in excel form on [advisory.com](http://advisory.com) to directly input and track data in one convenient location. This dynamic scorecard can be easily customized to include metrics optimal for a given system.

## Guidance on maximizing this scorecard

*Organization:* For ease of use, the scorecard is divided into several categories of metrics—the provider profile, clinical metrics, operational metrics, strategic metrics, and Covid-19 metrics. These categories were selected to align with the key areas indicating a SNF's potential as a successful partner—quality, efficiency, and alignment with system-specific goals.

*Data Source Identification:* The scorecard identifies metrics for which data can be collected from Medicare data sets, which can be accessed through CMS's [Nursing Home Compare](#), and Advisory Board's [Post-Acute Pathways Explorer](#). For other metrics, hospitals and SNFs should populate the data via internal tracking capabilities, or via qualitative discussion for more abstract metrics.

*Customization:* **This scorecard is designed to be a picklist of relevant metrics, not a list of all the metrics every provider should include. Must-use metrics are flagged at the beginning of each section with a red asterisk (\*). Providers should choose from the other metrics in each category to align with their health system's needs.**

Read on to view the metrics.

## Table of contents

Provider profile . . . . .	3
Clinical criteria . . . . .	4
Operational criteria . . . . .	6
Strategic criteria . . . . .	7
Covid-19 pandemic criteria . . . . .	8

# Provider profile

Before evaluating specific metrics, hospitals and SNFs should establish a clear background understanding of the SNFs being reviewed. This information helps hospital leaders understand the types of patients each SNF serves and contextualize metrics in the scorecard. For example, a SNF's readmission rate should be considered in the context of its diagnosis mix.

Additionally, these metrics can inform the type of partnership which makes the most sense to form. For example, a smaller facility may warrant a different type of partnership than a large facility, as there is a difference in potential hospital census that can be sent to the facility.

Key background considerations to understand a SNF's profile are listed below.

Metric	Rationale	Data source
<b>Number of certified beds*</b>	Number of certified beds and average daily census serve as an indicator of how many patients the SNF is equipped to care for and helps the hospital right-size the volume of patients referred.	<a href="#">Post-Acute Pathways Explorer</a> , Market Compare: SNF
<ul style="list-style-type: none"> <li>• <b>Diagnosis mix*</b> (% of patient population by discharge)</li> <li>• <b>HCC<sup>1</sup> score mix*</b> (% of patient population by discharge)</li> </ul>	<p>Diagnosis and HCC score mix help identify the patient populations the SNF is best able to serve and contextualizes outcomes metrics.</p> <ul style="list-style-type: none"> <li>• SNFs treating more challenging patient diagnoses are more likely to have higher readmission rates, due to the nature of their patient mix.</li> <li>• HCC scores are used by CMS to measure patient risk. A patient with a higher HCC score indicates a higher risk for health care utilization and cost.</li> </ul>	<ul style="list-style-type: none"> <li>• <a href="#">Post-Acute Pathways Explorer</a>, Patient Transitions Report; Internal SNF data</li> </ul>
<ul style="list-style-type: none"> <li>• <b>Located within a hospital?</b> (yes/no)</li> <li>• <b>In a Continuing Care Retirement Community?</b></li> </ul>	Sites of care co-located with a SNF may suggest more coordinated care between such sites, which can be beneficial during patient transitions.	<a href="#">Nursing Home Compare</a>
<b>Tax status</b> (non-profit/for profit)	Partnership vehicles may need to be structured differently based on the tax status of participants.	<a href="#">Nursing Home Compare</a>

1. Hierarchical Condition Category.

# Clinical criteria

Metric	Rationale	Data source
<b>30-day, all-cause, all-DRG readmission rate*</b>	Readmissions serve as a proxy measure for care quality and coordination. While risk-adjusted readmission rates are a more meaningful measure, they are <u>difficult to calculate</u> ; however, select third-party data vendors offer this capability.	<a href="#">Post-Acute Pathways Explorer</a> , Patient Outcomes Report
<b>Average length of stay*</b> (in days; for high-volume, high-variance diagnoses; short-stay patients only) <sup>1</sup>	An unnecessarily long length of stay significantly increases episode costs. However, average length of stay should be viewed in the context of the complexity and acuity of the provider's patient population; we recommend that hospitals consider ALOS for individual diagnoses, focusing on the highest-volume diagnoses with the greatest ALOS variation across providers.	<a href="#">Post-Acute Pathways Explorer</a> , Patient Outcomes Report
<b>Rate of Functional Improvement*</b> (% of stays showing improvement in ADL score—specifically, using three measures of mobility: bed mobility, transfer, and ambulation—from first to last MDS assessment) <sup>1</sup>	Significant functional improvement during a patient's stay demonstrates high-quality, effective care and appropriate utilization. Given the increase in therapy provided in SNFs over time and the large contribution of these therapy costs to total costs, MedPAC recommends measuring ability of SNFs to improve or maintain the functional status of their beneficiaries.	Internal SNF data
<b>Does medication reconciliation occur upon admission?</b> (% admissions, yes/no)	Prescription errors are especially prevalent in older patients who are more likely to take multiple medications and whose ability to absorb, process, and respond to drugs has been altered by the aging process. These errors can often cause rehospitalizations.	Internal SNF data
<b>Percentage of short-stay residents who got antipsychotic medication for the first time</b>	Inappropriate use of antipsychotics frequently leads to negative outcomes for elderly patients—for example, elderly dementia patients taking an antipsychotic have a 1.6 times greater mortality risk than those not receiving an antipsychotic. Therefore, antipsychotics should be used appropriately, only after lower-risk interventions have been attempted. Yet studies have found that 83% of antipsychotics administered to elderly nursing facility residents were prescribed for off-label uses, and 17% of nursing facility patients receiving antipsychotics were given the drugs at a level which exceeded recommended daily dosage.	<a href="#">Post-Acute Pathways Explorer</a> , Market Compare: SNF

1. Providers may group patients either by the primary diagnosis/condition they are assigned upon arrival at the SNF, or by their hospital discharge MS-DRG. We recommend grouping current data by primary diagnosis/condition as that data element should be easily available. However, where possible it will also be valuable to group historical data by discharge MS-DRG. Hospitals can more easily interpret length of stay in terms of discharge MS-DRG (perhaps organized to inpatient service lines), since it reflects the patient classification system they are most familiar with. However, because the discharge MS-DRG provided to SNFs upon a patient's arrival is only provisional (it is not verified or finalized until claims are processed), SNFs usually do not know the final discharge MS-DRG upon patient arrival. Advisory Board tools draw on claims data and therefore do have the ability to track length of stay by final discharge MS-DRG, but this data often has a substantial time lag. SNFs' information on patient primary diagnosis/condition, on the other hand, should be easily accessible and up-to-date.

# Clinical criteria continued

Metric	Rationale	Data source
<b>Frequency of medication review</b> (number of occurrences during one month; long-stay patients only)	Providers should regularly review continued appropriateness of medication—particularly antipsychotics—to ensure that a temporary disturbance does not result in unnecessary long-term use.	Internal SNF data
<b>Percentage of short-stay residents who experience one or more falls with major injury during their SNF stay</b>	Falls should be avoidable in most cases with proper patient segmentation, care planning, and preventive measures. However, in the six months after hospital discharge, up to 40% of elderly patients fall in the six months and up to 15% of unplanned hospital readmissions are due to a fall.	<u>Post-Acute Pathways Explorer</u> , Market Compare: SNF
<b>Rate of healthcare-acquired infections and conditions</b> (UTIs, pressure ulcers)	Proper care protocols should keep patients from developing these avoidable conditions—which often have severe consequences for the elderly. For example, UTIs are one of the top five preventable conditions causing readmissions from SNFs, and pressure ulcers cause pain, infectious complications, prolonged and expensive hospitalization, and increased risk of death.	<u>Post-Acute Pathways Explorer</u> , Market Compare: SNF
<b>Are universal mental health screenings conducted?</b> (yes/no)	Many individuals with chronic illnesses also have co-morbid mental health concerns that significantly impact their health outcomes and quality of life. Mental health screenings allow providers to either address the psychosocial aspects of care or link patients to appropriate services.	Internal SNF data

1. For additional detail on suggested methodology, please see p. 192-193 of the Medicare Payment Advisory Commission report cited on this page.

# Operational criteria

Metric	Rationale	Data source
<b>Average response time to referrals*</b> (in hours)	For a safe and efficient transfer, SNFs must be able to accept referrals as soon as possible after the patient is ready for discharge from the hospital. Hospitals should be sure to specifically ask about admissions availability after hours and on weekends.	Internal hospital data
<b>Medicare spending per beneficiary*</b> (displayed as a ratio)	<p>This measure shows whether Medicare spends more, less or about the same on an episode of care for a Medicare resident treated in a specific SNF compared to how much Medicare spends on an episode of care across all SNFs nationally.</p> <p>A lower MSPB may indicate an efficient provider. However, hospitals should ensure that it is not accompanied by poor outcomes.</p>	<a href="#">Post-Acute Pathways Explorer</a> , Market Compare: SNF
<b>Hospital patient acceptance rate</b>	SNFs that readily accept a high number of a hospital's patients generally have the clinical capability to handle the full range of acuity seen in the hospitals' patient panel and are more likely to align with the hospital's initiatives.	Internal hospital data
<b>Patient/caregiver satisfaction score</b> (% rating facility as "excellent" or "good")	Higher patient and caregiver satisfaction scores indicate the quality of the care team. Additionally, satisfied patients are more likely to have a positive impression of their entire care episode, including care received in the hospital itself. SNFs should routinely survey patients on their satisfaction with the facility's environment, staff, administration, activities, meals and dining, and social services.	Internal SNF data
<b>Annual staff turnover Rate (%)</b>	High staff turnover is associated with both higher costs and poorer quality of care. Turnover disrupts patients' continuity of care and reduces the amount of time a staff member may spend caring for each patient. Furthermore, it incurs costs due to recruitment, selection, and training of new staff and reduced efficiency of new staff.	Internal SNF data
<b>Total licensed nurse staff hours per resident day</b> (RN and LPN)	Nursing staff hours directly measure the amount of daily interaction between patients and nurses.	<a href="#">Post-Acute Pathways Explorer</a> , Market Compare: SNF
<b>24/7 RN presence</b> (yes/no)	Higher levels of RN staffing are positively associated with quality.	Internal SNF data
<b>Use of staffing agency nurses</b> (% of agency staffing hours relative to total staffing hours in one month)	Increased staffing agency use is associated with decreased quality.	Internal SNF data

Source: Stone RI. Department of Health and Human Services, "Who Will Care For Us? Addressing the Long-Term Care Workforce Crisis," 2001, <http://aspe.hhs.gov/daltcp/reports/tcwf.htm>; Scanlon WJ. Government Accounting Office, "Nursing workforce: Recruitment and retention of nurses and nurse aides is a growing concern," 2001, GAO-01-7507; Castle NG, et al., "Caregiver Staffing in Nursing Homes and Their Influence on Quality of Care," FAAN, 49, no. 6 (2011), 545-552; Advisory Board interviews and analysis.

# Strategic criteria

Metric	Rationale	Data source
<ul style="list-style-type: none"> <li>• <b>Volume of the hospital's patients treated by the SNF*</b></li> <li>• <b>Strong relationship with hospital</b> (ranked on a scale of strength of 1-10)</li> </ul>	<p>An existing strong relationship between hospital and SNF is an indicator of partnership viability. Specific indicators may vary, based on the hospital's goals for the partnership. Some potential indicators include:</p> <ul style="list-style-type: none"> <li>• Patient volumes from the hospital</li> <li>• Use of the hospital's medical director</li> <li>• Use of the hospital's physicians</li> <li>• Existing partnership initiatives, such as joint pathways</li> </ul>	<ul style="list-style-type: none"> <li>• <a href="#">Post-Acute Pathways Explorer</a>, Patient Outcomes Report</li> <li>• <a href="#">Post-Acute Pathways Explorer</a>, Patient Outcomes Report; Internal Hospital/SNF data</li> </ul>
<p><b>Existence of aligned specialty program</b> (ranked on importance to the hospital on a scale of 1-10)</p>	<p>A health system may strategically choose a SNF partner based on clinical capabilities that align with the health system's patient population.</p>	<p>Internal Hospital/SNF data</p>
<p><b>Collaboration with other providers</b> (ranked on a scale of strength of 1-10)</p>	<p>SNFs with strong up- and/or downstream relationships can better manage safe transitions and right-size utilization of each setting.</p>	<p>Internal SNF data</p>

# Covid-19 pandemic criteria

Metric	Rationale	Data source
<ul style="list-style-type: none"> <li>• <b>Rate of staff Covid-19 vaccination*</b></li> <li>• <b>Rate of patient Covid-19 vaccination*</b></li> </ul>	High rates of Covid-19 vaccination are important for stopping the spread of the virus and protecting staff and patients alike.	Internal SNF data
<ul style="list-style-type: none"> <li>• <b>Existence of separate quarantine unit(s) for Covid-19 patients*</b> (yes/no)</li> <li>• <b>Access to adequate PPE to last at least next two weeks</b> (yes/no)</li> <li>• <b>Adherence to CDC, state, and local Covid-19 guidance</b> (yes/no)</li> </ul>	These infection control measures promote the safety of staff and patients alike.	Internal SNF data
<ul style="list-style-type: none"> <li>• <b>Total Covid-19 cases</b></li> <li>• <b>Total Covid-19 deaths as a percentage of confirmed cases</b></li> </ul>	These data points are meant to give the hospital an idea of how the SNF fared during the Covid-19 pandemic. However, it is important to contextualize this data with the below listed data points.	<a href="#">Covid-19 Nursing Home Data</a>
<ul style="list-style-type: none"> <li>• <b>Community Covid-19 spread</b></li> <li>• <b>Urban location</b> (yes/no)</li> <li>• <b>Number of certified beds</b></li> </ul>	These data points are meant to contextualize the above data regarding Covid-19 cases and deaths. The risk factors most associated with high Covid-19 cases and deaths in SNFs are outside the control of SNFs, such as community spread, urban location, and large bed count. Therefore, when judging SNF quality based on Covid-19 performance, SNFs must be looked at in the context of their surroundings.	<ul style="list-style-type: none"> <li>• Local data</li> <li>• SNF website</li> <li>• <a href="#">Post-Acute Pathways Explorer</a>, Market Compare: SNF</li> </ul>
<b>CMS star rating for staffing</b>	While studies have failed to find correlations between overall CMS star rating and Covid-19 performance, three out of four studies done on the relationship between CMS star rating for staffing and Covid-19 performance have found a relationship between better staffing star rating and fewer cases and deaths.	<a href="#">Post-Acute Pathways Explorer</a> , Market Compare: SNF
<b>Rate of staff working at more than one facility</b>	The more shared workers a nursing home has, the more likely it is to have a higher number of Covid-19 infections.	Internal SNF data
<b>Relationship with hospital during Covid-19 pandemic</b> (on a scale of 1-10)	The Covid-19 pandemic has necessitated greater care coordination between hospitals and SNFs. Additionally, hospitals and SNFs have partnered to secure PPE, implement infection control measures, and even influence state legislation. A SNF that was a willing and enthusiastic partner with the hospital during the pandemic may be a good fit for long-term partnership.	Internal hospital data

### LEGAL CAVEAT

Advisory Board has made efforts to verify the accuracy of the information it provides to members. This report relies on data obtained from many sources, however, and Advisory Board cannot guarantee the accuracy of the information provided or any analysis based thereon. In addition, Advisory Board is not in the business of giving legal, medical, accounting, or other professional advice, and its reports should not be construed as professional advice. In particular, members should not rely on any legal commentary in this report as a basis for action, or assume that any tactics described herein would be permitted by applicable law or appropriate for a given member's situation. Members are advised to consult with appropriate professionals concerning legal, medical, tax, or accounting issues, before implementing any of these tactics. Neither Advisory Board nor its officers, directors, trustees, employees, and agents shall be liable for any claims, liabilities, or expenses relating to (a) any errors or omissions in this report, whether caused by Advisory Board or any of its employees or agents, or sources or other third parties, (b) any recommendation or graded ranking by Advisory Board, or (c) failure of member and its employees and agents to abide by the terms set forth herein.

Advisory Board and the "A" logo are registered trademarks of The Advisory Board Company in the United States and other countries. Members are not permitted to use these trademarks, or any other trademark, product name, service name, trade name, and logo of Advisory Board without prior written consent of Advisory Board. All other trademarks, product names, service names, trade names, and logos used within these pages are the property of their respective holders. Use of other company trademarks, product names, service names, trade names, and logos or images of the same does not necessarily constitute (a) an endorsement by such company of Advisory Board and its products and services, or (b) an endorsement of the company or its products or services by Advisory Board. Advisory Board is not affiliated with any such company.

### IMPORTANT: Please read the following.

Advisory Board has prepared this report for the exclusive use of its members. Each member acknowledges and agrees that this report and the information contained herein (collectively, the "Report") are confidential and proprietary to Advisory Board. By accepting delivery of this Report, each member agrees to abide by the terms as stated herein, including the following:

1. Advisory Board owns all right, title, and interest in and to this Report. Except as stated herein, no right, license, permission, or interest of any kind in this Report is intended to be given, transferred to, or acquired by a member. Each member is authorized to use this Report only to the extent expressly authorized herein.
2. Each member shall not sell, license, republish, or post online or otherwise this Report, in part or in whole. Each member shall not disseminate or permit the use of, and shall take reasonable precautions to prevent such dissemination or use of, this Report by (a) any of its employees and agents (except as stated below), or (b) any third party.
3. Each member may make this Report available solely to those of its employees and agents who (a) are registered for the workshop or membership program of which this Report is a part, (b) require access to this Report in order to learn from the information described herein, and (c) agree not to disclose this Report to other employees or agents or any third party. Each member shall use, and shall ensure that its employees and agents use, this Report for its internal use only. Each member may make a limited number of copies, solely as adequate for use by its employees and agents in accordance with the terms herein.
4. Each member shall not remove from this Report any confidential markings, copyright notices, and/or other similar indicia herein.
5. Each member is responsible for any breach of its obligations as stated herein by any of its employees or agents.
6. If a member is unwilling to abide by any of the foregoing obligations, then such member shall promptly return this Report and all copies thereof to Advisory Board.
